

OUR QUALITY, WORKING CONDITIONS AND ENVIRONMENTAL POLICIES.

With committed professionals, high quality equipment and high safety standards, BUKO Infrsupport delivers a major contribution to the safety of road users and those who work on the roads. Day and night. Throughout the Netherlands. For over 30 years.

COLLABORATING ON QUALITY

The professionals at BUKO Infrsupport make the organisation successful. With their professional knowledge and experience they are always ready to provide the correct traffic control measures for any project. By investing in our business relations, our professional people know not only what our clients want, but also what they need in order to be able to complete their project while keeping the traffic safe. BUKO Infrsupport attaches great importance to quality. We make sure we have safe, clean and new equipment and only work with approved work equipment. Any defects are reported rapidly by our professional employees. We invest continuously and keep developing our products. In this way, our professional staff and those we work with can always count on having reliable equipment. We always look for anything that could be done better. Whether in terms of our services or in terms of our equipment. This way we provide a professional and safe working environment.

WORKING TOGETHER ON ROAD SAFETY

Working for and with BUKO Infrsupport means working on safety. We believe safety is the most important thing. Working safely for us means working in compliance with laws and regulations, and working in accordance with our own rules, procedures, instructions and those of our clients. But there's much more involved than that. We believe in collaboration. Deliberately working together safely. Always keeping an eye out for the risks in our work. Never working in dangerous situations, but reporting them instead. To prevent them recurring in future. Always showing commitment. Looking out for each other. Identifying what works and what could be done better. Competent in your area of expertise. Using professional skills and acquired experience to keep work and project locations safe at all times. For yourself, for your colleagues and for others. Setting a good example. Showing how we work safely, with the right measures in place to provide safety. So that we can all go home safe and sound.

COLLABORATING TO ENJOY OUR WORK

At BUKO Infrsupport everyone makes their own contribution in their own way. To safety, health, vitality and enjoying our work. In the office, on the work bus, at the roadside or on the building site. Everywhere. We collaborate. Every time. Because together we go further. We look out for each other and take time to celebrate the successes we achieved. During work and outside it. For example, during company outings and parties. We listen to each other and work hard to stay healthy together. For example, we have fruit delivered at work. And an attractive cycle plan. We are there for each other, and we give each other space. If we get stuck, then we always look at what we can do for each other. At work but also at home. We discuss what we could do better. Or not do better. As a result, smoking is being banned in more and more places in our organisation. We look beyond today's trend. Including when dealing with vitality. Because we want to continue in future years to enjoy working together.

ADVANCING TOGETHER TOWARDS A SUSTAINABLE

At BUKO Infrsupport we are making progress. We plan for the future. We are interested in developments in the area of sustainability. We take a critical look at our business processes. When dealing with sustainability, we set clear targets and work together to achieve these targets. We continuously monitor not only our environmental impact, but also the sustainable qualifications of our employees. We have structures that support BRAVO topics. Every permanent or temp employee can make a contribution to making our organisation more sustainable. Sometimes we take a look back But only to check whether we are achieving our targets. If we can do something more economically or efficiently, then we invest in that. This way, we all ensure that we are continuously having the minimum impact on the environment, and we actively reduce the risks of negative impacts on health from accidents or exposure to dangerous substances.
